

# Care for a Choking Adult

**1** If the person cannot speak, cough, or breathe or is making high-pitched noise, immediately begin care for choking.

Alternate between any two of the following methods until the object comes out: back blows, abdominal thrusts, and chest thrusts.

**2**

## BACK BLOWS

- Place your arm across the person's chest.
- Bend the person forward and deliver up to 5 firm blows between the shoulder blades.

## ABDOMINAL THRUSTS

- Place your fist just above the belly button.
- Give up to 5 quick, inward and upward thrusts.

## CHEST THRUSTS

- Place your fist in the middle of the person's chest with your thumb facing inward, and place your other hand over your fist.
- Give up to 5 chest thrusts by pulling straight back.

**3**

Continue providing care until the object comes out or the person begins to breathe or cough. If the person becomes unresponsive, call EMS/9-1-1 and begin CPR, starting with chest compressions.
