

CPR for a Baby

1

Check the baby and the baby's ABCs (Airway, Breathing, Circulation).

If the baby is unresponsive and not breathing normally, call EMS/9-1-1 and get an AED or have someone else do this.

2

Put 2 fingers on the middle of the baby's chest, or put your hands around the baby with both thumbs on the middle of the baby's chest.

Do 30 chest compressions: Push deeply and steadily.

3

Open the airway by tilting the head back and lifting the chin.

Place your barrier device over the baby's mouth and nose.

Give 2 breaths.

4

Repeat cycles of 30 chest compressions and 2 breaths.

Continue CPR until:

- EMS personnel or another person takes over.
- You are too tired to continue.
- The scene becomes unsafe.
- The baby shows an obvious sign of responsiveness (e.g., movement)
