

CARE FOR OPIOID POISONING

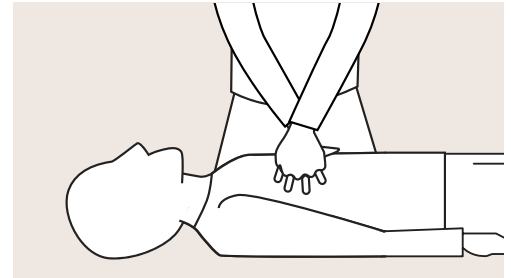

CHECK

Check the person

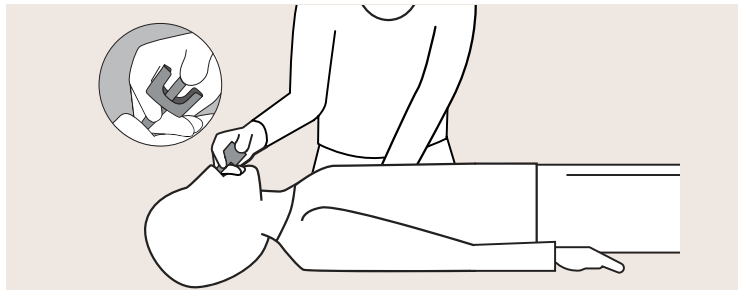

Call EMS/911

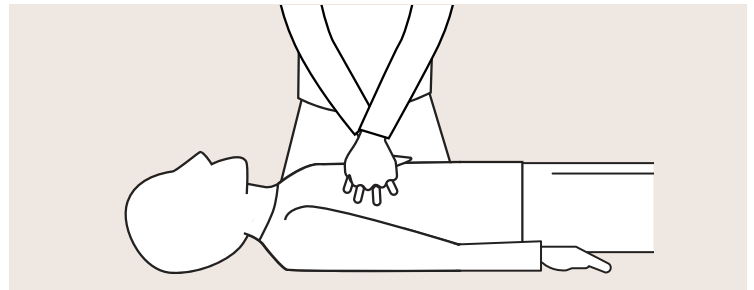

Start CPR

ADMINISTER NALOXONE

Tilt the head back, administer naloxone

Continue CPR

CARE

If no improvement after 2-5 minutes, administer naloxone again

If breathing, place person in recovery position

Be aware that when someone is revived using naloxone, they may become agitated/disoriented. The information in this poster does not replace formal First Aid & CPR training.

Visit redcross.ca/ohr for access to our First Aid for Opioid Poisoning online course and additional resources.
